Amendments to the Specification:

Please replace the paragraph beginning at page 15, line 9, with the following redlined paragraph:

The extension can be made by mapping each element of GF(p'), which appears in the starting matrix, in the corresponding element of the extended field. The correspondence between the elements of the two fields is expressed in the representation of $GF(p^{rs})$ on GF(p'), alongside which is to be set a representation of $GF(p^{rs})$ on GF(p'), which enables the performance in p-ary logic of the operations of encoding and decoding.
